ABOUT

Twenty-plus years of craft across global brand campaigns, cinematic product launches, social-first storytelling, and culture-defining work. Creative lead at Apple. Spirits and fast food at Havas. The Magic Jingle at Translation. I think in brand platforms, communicate in stories, and build things that live in culture, not just in media plans. In recent years I have developed genuine fluency in AI-native production: not as a novelty, but as a real expansion of what a creative leader can do.

AI FLUENCY

The tools have changed. The standards have not.

I know these tools well enough to know where they help and where they get in the way. Prompt engineering, iterative concepting, rapid image generation, across Claude, GPT, Gemini, Midjourney, and Higgsfield, each used for what it's actually good at rather than because it's the newest thing in the room. I'm not chasing every release, and I'm not sitting this one out either. The skill isn't operating the tools. It's knowing which one sharpens an idea and which one just speeds up the noise.
